CNA Webinar Series: Progress in Practice

Learn more about advancing public health nursing in schools

Lisa Ashley
Senior Nurse Advisor, Canadian Nurses Association

Carol MacDougall
School Health Manager, Perth District Health Unit

January 14, 2013
Lisa Ashley, RN, CCHN(C), MEd
Senior Nurse Advisor,
Policy and Leadership
Canadian Nurses Association

Carol MacDougall, RN, BScN, MA
School Health Manager
Perth District Health Unit
BE IT RESOLVED THAT CNA seeks to partner with governmental and non-governmental funders to undertake national public health nursing in schools research and policy analysis…to:

1) determine the extent to which public health nursing in schools and its various models of care delivery, is being implemented across Canada,
2) identify the outcomes and benefits associated with (models),
3) determine the strength of evidence supporting public health nursing in schools…,
4) identify the key barriers and facilitators…,
5) inform the development of evidence-based recommendations for nurses, organizations and system-level policy and decision-makers…
Researchers and advisory group

Researchers: Helena Wall and Alexandra Henteleff

Advisory group:

- Sara Clemens and Lynn Anne Mulrooney, Registered Nurses’ Association of Ontario
- Carol MacDougall, Community Health Nurses’ Initiatives Group; RNAO, Public Health Nurses in Schools Committee
- Cindy Versteeg and John Atkins, Political Action and Advocacy Standing Committee, Community Health Nurses of Canada
- Ruth Schofield, Community Health Nurses of Canada
- Fjola Hart Wasekeesikaw, Aboriginal Nurses Association of Canada
- Kate Thompson, Strategic Policy Branch, Health Canada
Public health nurses have the potential to significantly influence health and education outcomes of Canada’s school-age population. They are well positioned to build effective structures and processes that support school communities to identify and respond to the needs of the populations they serve.
Foundations of public health practice

The practice of public health is population-based.

The public health nurse:

• Focuses on entire populations and sub-populations that have similar health concerns and characteristics

• Is guided by an assessment of population health status that is determined through a community assessment process

• Considers the broad determinants of health

• Considers all levels of prevention, with a focus on primary prevention

• Considers all levels of practice including a community focus, a systems focus, and an individual/family focus

Barriers to working to full scope of practice

- Lack of clear role definition and role confusion
- Erosion of relationships
- Lack of outcome measures
- Lack of resources
- Lack of commitment/support
- Lack of organizational support
- Need for further competency development
Enablers to working to full scope of practice

- Clear role description and expectations
- Collaborative relationships
- Adequate human resources
- Organizational support
- Public health nursing competencies
Recommendations – individual level

• Increase personal knowledge about comprehensive school health and the role of public health nurses in the school setting
• Establish a visible presence in the schools and develop positive relationships with school staff
• Educate school staff about the role of public health nurses in the school setting
• Advocate for a national comprehensive school health strategy
Recommendations – organizational level

- Invest in a healthy schools strategy
- Develop and/or maintain intersectoral relationships
- Identify schools as a priority setting
- Commit to new resources or redistribute existing resources
- Articulate the role of public health nurses in schools
- Empower nurses to work to their full scope of practice
- Fund research
- Revise job descriptions to reflect public health nursing competencies
- Advocate for nursing education with strong public health component taught by nurses with student placements
Governments and policy-makers at all levels need to shift their funding and/or policy emphases to new school public health nursing models. Models must include:

– schools as a priority setting for the delivery of public health nursing services
– adequate public health nursing resources in schools
– strengthened collaboration between ministries
Next steps

• Analyse international perspective
• Analyse results from this research to develop policy recommendations
CNA Webinar Series

*Learn more about advancing public health nursing in schools*

Due to the large number of participants in this webinar, only questions in writing can be accepted, during or at the end of the presentations.

To submit a question:

1. Click the Q&A button.
2. Select “**All Panelists**” from the drop-down menu.
3. Type your question in the field.
4. Click “Send.”
